## Dual, Wide Bandwidth Analog Switches

## Features

- Single-Supply Operation (+2V to +6 V )
- Rail-to-Rail Analog Signal Dynamic Range
- Low On-Resistance (7.2-ohm with 5V supply) Minimizes Distortion and Error Voltages
- On-Resistance Flatness, 3-ohm typ.
- Low Charge Injection Reduces Glitch Errors. $\mathrm{Q}=1.6 \mathrm{pC}$ typ.
- High Speed. $\mathrm{t}_{\mathrm{ON}}=7 \mathrm{~ns}$ typ.
- Wide - 3 dB Bandwidth: 326 MHz
- High-Current Channel Capability: $>100 \mathrm{~mA}$
- TTL/CMOS Logic Compatible
- Low Power Consumption ( $5 \mu \mathrm{~W}$ typ.)
- Packaging (Pb-free \& Green Available) - 8-pin, 118 mil plastic MSOP (U)

## Applications

- Audio, Video Switching and Routing
- Battery-Powered Communication Systems
- Computer Peripherals
- Telecommunications
- Portable Instrumentation
- Mechanical Relay Replacement
- Cell Phones
- PDAs

## Description

The PI5A127 is a dual SPST (single-pole single-throw) analog switches designed for single supply operation. These high-precision devices are ideal for low-distortion audio, video, signal switching and routing.
The PI5A127 is a normally closed (NC) switch.
Each switch conducts current equally well in either direction when on. When off, they block voltages up to $\mathrm{V}+$.
These switches are fully specified with +5 V and +3.3 V supplies. With +5 V , they guarantee $<10$-ohm ON-resistance. On-resistance matching between channels is within 2 -ohm. On-resistance flatness is less than 5 -ohm over the specified range. These switches also guarantee fast switching speeds ( $\mathrm{t}_{\mathrm{ON}}<20 \mathrm{~ns}$ ).
These products are available in 8-pin SOIC and MSOP plastic packages for operation over the industrial temperature range $\left(-40^{\circ} \mathrm{C}\right.$ to $\left.+85^{\circ} \mathrm{C}\right)$.

## Functional Diagrams, Pin Configurations and Truth Tables

Absolute Maximum Ratings
Voltages Referenced to GND
$\mathrm{V}_{+}$ $\qquad$ -0.5 V to +7 V
$\mathrm{V}_{\mathrm{IN}}, \mathrm{V}_{\mathrm{COM}}, \mathrm{V}_{\mathrm{NC}}, \mathrm{V}_{\mathrm{NO}}$ (Note 1) $\qquad$ -0.5 V to $\mathrm{V}++2 \mathrm{~V}$ . or 30 mA , whichever occurs first Current (any terminal except COM,NO,NC) $\qquad$ 30 mA

Current, COM, NO, NC 100 mA
(Pulsed at $1 \mathrm{~ms}, 10 \%$ duty cycle) $\qquad$ 120 mA

## Thermal Information

Continuous Power Dissipation
$-6\left(\right.$ derate $7 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$ above $+70^{\circ} \mathrm{C}$ ) 550 mW

Storage Temperature $\qquad$ $-65^{\circ} \mathrm{C}$ to $+150^{\circ} \mathrm{C}$
Lead Temperature (soldering, 10s)
$+300^{\circ} \mathrm{C}$

## Note 1:

Signals on NC, NO, COM, or IN exceeding V+ or GND are clamped by internal diodes. Limit forward diode current to 30 mA .

Caution: Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions beyond those indicated in the operational sections of this specification is not implied.

Electrical Specifications - Single +5 V Supply $\left(\mathrm{V}+=+5 \mathrm{~V} \pm 10 \%\right.$, $\left.\mathrm{GND}=0 \mathrm{~V}, \mathrm{~V}_{\mathrm{INH}}=2.4 \mathrm{~V}, \mathrm{~V}_{\mathrm{INL}}=0.8 \mathrm{~V}\right)$

## Notes:

1. The algebraic convention, where the most negative value is a minimum and the most positive is a maximum, is used in this data sheet.
2. Typical values are for DESIGN AID ONLY, not guaranteed or subject to production testing.
3. Guaranteed by design
4. $\Delta \mathrm{R}_{\mathrm{ON}}=\mathrm{R}_{\mathrm{ON}} \max -\mathrm{R}_{\mathrm{ON}} \min$.
5. Flatness is defined as the difference between the maximum and minimum value of ON -resistance measured.
6. Leakage parameters are $100 \%$ tested at maximum rated hot temperature and guaranteed by correlation at $+25^{\circ} \mathrm{C}$.

Electrical Specifications - Single +5 V Supply ( $\mathrm{V}+=+5 \mathrm{~V} \pm 10 \%, G \mathrm{GND}=0 \mathrm{~V}, \mathrm{~V}_{\mathrm{INH}}=2.4 \mathrm{~V}, \mathrm{~V}_{\mathrm{INL}}=0.8 \mathrm{~V}$ )
